Summary:
 I am a Southern California-based Web Developer, with experience working in HTML5, CSS3, JavaScript, Ruby on Rails, jQuery, Node, PHP and React. I have been using these experiences to produce several online apps that showcase my creativity and ability. I enjoy working on full-stack applications in a team oriented environment, building exciting applications that will improve people's lives. Before becoming a developer, I worked for a tech startup on a brand-new app. I was in charge of managing and editing the app's content, and came to understand the multitude of challenges and opportunities in the tech world. I'm currently working on a new app called StayLoudLA, a calendar app made using PHP, Facebook Open Graph and jQuery. I plan to continue to grow as a developer, in order to continue to make better applications.

Technical Skills:
 Languages: HTML5, CSS3, JavaScript, Ruby, PHP, Python   **Front-end-Libraries**: jQuery, Bootstrap, SASS
 Web Application Frameworks: Node, React, Express, AJAX, AngularJS, JSON, Ruby on Rails
 Version Control: Git/GitHub, Heroku   **Databases:** MySQL, PostgreSQL, MongoDB

Projects:
Riddle Me This
A multiple-choice puzzle game designed for two players and developed in a three day sprint.
Made with HTML5, CSS3, JavaScript and jQuery.

MovieTroll
MovieTroll is an application for movie critique and review. This application was developed as a group. I was in charge of creating the comment section.
 Developed on HTML5, Node, Express, MongoDB, CSS3, AJAX and Bootstrap.

QuestionThis
QuestionThis is the latest question and answer application on the web.
Developed with HTML5, React, Node, Express, CSS3 and MongoDB.

FanLife
An application created in a four day sprint, FanLife allows users to comment and favorite their favorite shows and movies.
Developed with Ruby on Rails, Bootstrap, CSS3 and PostgreSQL.
